

Project Initialization and Planning Phase

Date	29 September 2026
Team ID	SWTID-2026-1410
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders With Flow Designer
Maximum Marks	3 Marks

Problem Statement:

Employees who need a standard laptop have to raise a request that IT staff then handle by hand, creating and assigning the fulfillment task themselves. Because this depends on manual steps, orders are delayed, requests can be missed or handled inconsistently, and employees cannot easily see the status of their order. We need a Service Catalog order for the Standard Laptop that automatically creates a task for the Hardware team, so that laptops are fulfilled faster and every request is tracked with a request number.

Customer Problem Statements:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	An employee who needs a standard laptop for work.	Order a laptop quickly through the Service Catalog.	Every request waits for manual approval and follow-up emails.	The ordering process is slow and I cannot see the status of my request.	Frustrated and uncertain about when I will get my laptop.
PS-2	An IT procurement / fulfillment agent.	Process standard laptop orders accurately and on time.	I have to manually check each request, create tasks and update asset records.	Routine orders are repetitive and the manual steps lead to delays and errors.	Overloaded and unable to focus on complex requests.
PS-3	A manager who approves equipment requests.	Approve only the requests that really need my decision.	I receive approval requests even for standard, in-budget laptops.	There are no automated rules to approve standard orders on my behalf.	Interrupted and concerned about wasted time.
