Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders With Flow Designer
Maximum Marks	4 Marks

Empathy Map

This empathy map shows how an employee who needs a standard laptop (Arjun) experiences the current ordering process: what he says, thinks, does and feels. It helps the team design an ordering flow that gives a quick confirmation, a clear request number and automatic task creation for the Hardware team.

SAYS • “I ordered my laptop last week. Where is my request?” • “Why does a standard laptop need so many approvals?” • “I just need a working laptop to start my project.”		THINKS • “Will my request get lost in email threads?” • “Someone should be able to tell me the status.” • “This should be automatic for a standard model.”
	ARJUN <i>(Employee requesting a standard laptop)</i>	
DOES • Raises a laptop request through the Service Catalog • Follows up with the manager and IT desk by email or chat • Waits and checks the ticket repeatedly for updates		FEELS • Frustrated by delays and repeated follow-ups • Anxious about not being able to start work • Relieved when the request is approved quickly
