

Data Flow Diagram

Date	29 September 2026
Team ID	SWTID-2026-1410
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders With Flow Designer
Maximum Marks	2 Marks

Data Flow Diagram

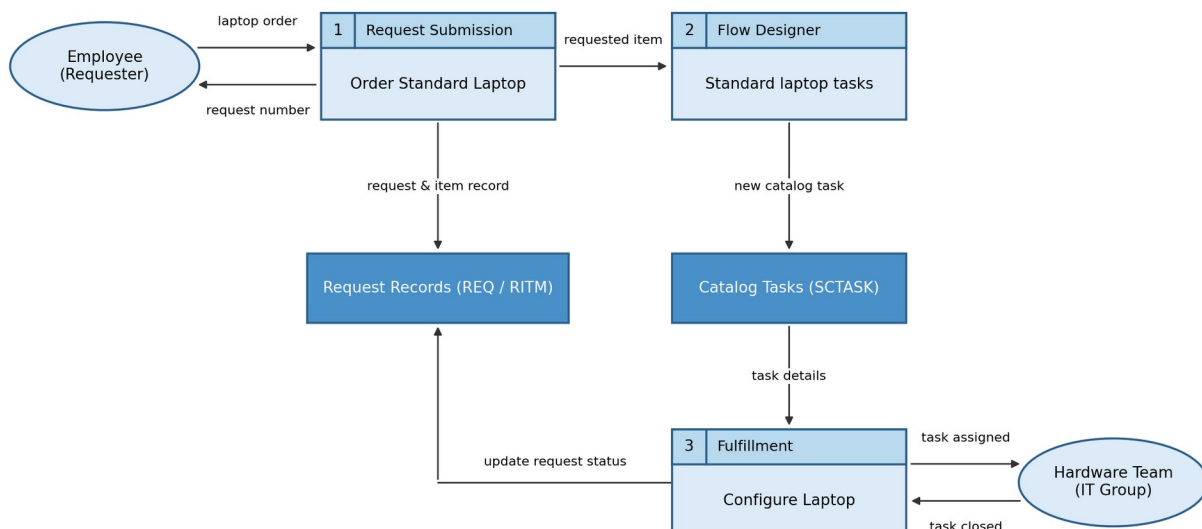

This data flow diagram shows how data moves when a laptop is ordered: the Employee submits a request through the Service Catalog, the flow "Standard laptop tasks" creates a catalog task, and the Hardware team fulfills it. The legend below explains the symbols used for external entities, processes and data stores.

DFD Symbol Legend

Symbol	Name	Description
Oval / Rounded shape	External Entity	A person, organization, or system outside the project that sends or receives data (e.g., Customer, Payment Gateway).
Rectangle with numbered header	Process	An activity that transforms incoming data into outgoing data (e.g., Validate Request, Process Order).
Rectangle (solid fill, no number)	Data Store	A place where data is held for later use (e.g., Customer Database, Inventory).
Labeled arrow	Data Flow	The movement of data between entities, processes, and data stores, labeled with what data is being passed.

Data Flow Diagram: Automating Standard Laptop Orders

The diagram below shows how data moves between the employee, the Hardware team, the three processes and the two data stores of the laptop ordering system.

Process Description

No.	Process	Description
1	Request Submission	The employee opens the Service Catalog, selects Standard Laptop and clicks Order Now. A request (REQ) and requested item (RITM) are created and the request number is shown.
2	Flow Designer Flow	The flow "Standard laptop tasks" is triggered by the Service Catalog and runs the Create Catalog Task action for the requested item.
3	Task Fulfillment	The catalog task (SCTASK, assigned to the Hardware group) is worked by the Hardware team. When the laptop is configured the task is closed and the request status is updated.
