Project Title	Streamlining IT Procurement: Automating Standard Laptop Orders With Flow Designer
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

This proposal describes how standard laptop ordering in ServiceNow is automated with Flow Designer. Manual, delay-prone request handling is replaced by a Service Catalog order that triggers a flow, which creates a catalog task for the Hardware team. This gives faster fulfillment and clearer tracking of every request.

Project Overview	
Objective	The primary objective is to automate standard laptop orders in ServiceNow so that every request placed through the Service Catalog automatically creates a fulfillment task for the Hardware team, removing manual follow-up.
Scope	The project covers the Standard Laptop catalog item (Lenovo Carbon x1 with optional software) and a Flow Designer flow named "Standard laptop tasks" that is triggered by the Service Catalog and creates a catalog task for the Hardware group. Multi-level approvals, notifications and asset/inventory updates are outside the current scope.
Problem Statement	
Description	Standard laptop requests are handled manually, so fulfillment tasks have to be created and assigned by hand. This causes delays, repeated follow-ups and inconsistent request details.
Impact	Automating the process gives faster fulfillment, consistent tasks for the IT team, clear tracking through request numbers, and less manual effort for both employees and IT.
Proposed Solution	
Approach	Build a Standard Laptop catalog item in the ServiceNow Service Catalog, create a Flow Designer flow with a Service Catalog trigger and a Create Catalog Task action, link the flow to the item through the Process Engine tab, activate it and test it by placing an order.
Key Features	- Standard Laptop catalog item with optional software (Adobe Acrobat, Adobe Photoshop) and an additional requirements field. - Automatic creation of a catalog task (SCTASK) for the Hardware group on every order. - Request number (REQ) shown after ordering, with the request, item and task records linked for tracking. - Low-code flow that is easy to extend later with approvals and notifications.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU/GPU specifications, number of cores	Standard laptop/PC; no GPU needed (platform is cloud hosted)
Memory	RAM specifications	4 GB or more, enough to run a modern web browser
Storage	Disk space for data, models, and logs	No local storage needed; data is stored on the ServiceNow instance
Software		
Frameworks	Platform / low-code tools	ServiceNow Service Catalog and Flow Designer (Workflow Studio)
Libraries	Additional libraries	None (no custom code or external libraries)
Development Environment	IDE / tools	Web browser (ServiceNow instance UI), Catalog item form and Workflow Studio
Data		
Data	Source, size, format	ServiceNow records created during the project: catalog item, request, requested item and catalog task (sample orders for testing)
