Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders With Flow Designer
Maximum Marks	5 Marks

Coding & Solution

This section summarizes the implemented solution: a Standard Laptop catalog item linked to the flow "Standard laptop tasks", which creates a catalog task for the Hardware team when an order is placed. The solution works end to end and was verified with the test order REQ0010001.

How the Solution Meets the Requirements:

1. The catalog item and flow are built with ServiceNow configuration, and each component has a clear name.
2. The solution addresses the core problem: a laptop order automatically creates a fulfillment task, so no one raises it by hand.
3. No source files are needed. The catalog item and flow are on the instance dev277579.service-now.com, and the setup and run steps are in Project Executable Files.
4. The project documents and screenshots are kept in the GitHub repository linked in the table below.

Solution Summary

Field	Details
Repository Link / URL	https://github.com/Ganapathivr/Streamlining-IT-Procurement-Automating-Standard-Laptop-Orders-with-Flow-Designer
Programming Language(s)	None. This is a low-code solution built by configuration in ServiceNow, so no custom code or scripts were written.
Framework(s) Used	ServiceNow Service Catalog and Flow Designer (Workflow Studio)
Key Features Implemented	• Standard Laptop catalog item (Lenovo Carbon x1, Hardware category) with optional software checkboxes and an additional requirements field • Order Now creates a request (REQ) and requested item (RITM) and shows the request number • Flow "Standard laptop tasks" with a Service Catalog trigger • Create Catalog Task action that creates a task (SCTASK) for the Hardware group with the description "Laptop need to Configured" and Approval set to Approved • Catalog item linked to the flow (Process Engine tab) and the flow activated
Pending / Incomplete Features	• Manager approval step in the flow • Email notifications to the requester • Asset / inventory update and reporting dashboard • Flow error handler and flow description
Setup / Run Instructions	1. Log in to the ServiceNow instance. 2. Open All > Service Catalog > Catalog Definitions > Maintain Items and open the "Standard Laptop" item. 3. On the Process Engine tab, set Flow to "Standard laptop tasks" and click Update. 4. Open All > Flow Designer (Workflow Studio), open the flow "Standard laptop tasks" and make sure it is Active (click Activate if needed). 5. Open Service Catalog > Hardware > Standard Laptop, tick the optional software if required and click Order Now. 6. Open the request (for example REQ0010001) and check that the requested item and the catalog task (for example SCTASK0010001) were created.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	No
4	Error handling is implemented for critical operations	No
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

- This project is low-code: the solution is built by configuring ServiceNow (catalog item and Flow Designer flow), so there are no source files. The project documents and screenshots are kept in the GitHub repository.
- The catalog item and the flow are separate, clearly named components ("Standard Laptop" and "Standard laptop tasks").
- Not done yet: the flow has no description and the error handler is off. These are listed as future improvements.
