

Project Executable Files

Date	29 September 2026
Team ID	SWTID-2026-1410
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders With Flow Designer
Maximum Marks	3 Marks

Project Executable Files

This section lists everything needed to run and check the project. Because the solution is built by configuration in ServiceNow, there are no source files to run. The evaluator opens the instance, the catalog item and the flow using the access details and steps below.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	NA (low-code: built by configuration in ServiceNow; see Project Documentation)
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	NA
4	Database schema / seed files (if applicable)	NA (uses built-in ServiceNow tables)
5	Environment configuration file (.env.example or similar)	NA
6	Deployed application URL (if hosted)	Yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes (link in Step 3)

Step 2: File / Folder Structure

Overview of the project's file and folder structure:

/Streamlining-IT-Procurement-Automating-Standard-Laptop-Orders-with-Flow-Designer (GitHub repository root)

- /1. Brainstorming & Ideation - Brainstorming & Idea Prioritization, Define Problem Statements, Empathy Map
- /2. Requirement Analysis - Data Flow Diagram, Solution Requirements, Technology Stack, Customer Journey Map
- /3. Project Design Phase - Proposed Solution, Solution Architecture, Problem-Solution Fit
- /4. Project Planning Phase - Project Planning (product backlog and sprint schedule)
- /5. Project Development Phase - Coding & Solution, No. of Functional Features, Code-Layout Readability and Reusability
- /6. Project Testing - Performance Testing
- /7. Project Documentation - Project Executable Files, Project Documentation
- /8. Project Demonstration - Demo video / walkthrough

README.md - Repository overview

On the ServiceNow instance (no source files):

Catalog item: Standard Laptop (Service Catalog > Hardware)

Flow: Standard laptop tasks (Flow Designer / Workflow Studio)

Step 3: Deployment / Access Details

Hosted / Deployed URL	https://dev277579.service-now.com (ServiceNow Personal Developer Instance)
Login Credentials (Demo)	Username: demo.user Password: Shri@2006
Platform / Hosting Provider	ServiceNow (Personal Developer Instance, cloud hosted)
Repository Link	https://github.com/Ganapathivr/Streamlining-IT-Procurement-Automating-Standard-Laptop-Orders-with-Flow-Designer
Demo Video Link	https://drive.google.com/file/d/1J0zSIXrpNa85BnepJozsKwxkwix6y7iJ/view?usp=sharing

Step 4: Run Instructions

Step-by-step instructions for the evaluator to run the project:

Pre-requisites:

- A web browser (Chrome or Edge) and an internet connection
- Access to the ServiceNow instance above with a user who can open the Service Catalog

Steps:

1. Log in to the ServiceNow instance.
2. Open All > Service Catalog > Catalog Definitions > Maintain Items and open the "Standard Laptop" item.
3. On the Process Engine tab, check that Flow is "Standard laptop tasks".
4. Open All > Flow Designer and check that the flow "Standard laptop tasks" is Active.
5. Open Service Catalog > Hardware > Standard Laptop and click Order Now.
6. Note the request number shown, then open the request (for example REQ0010001) and its catalog task (for example SCTASK0010001).

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Flow only creates the catalog task. There is no manager approval, email notification or inventory update yet.	Planned as future improvements
2	The catalog task must be closed manually by the Hardware team after the laptop is configured.	In progress; task closure will be tested
3	Load with many users and CPU / memory use have not been measured.	Planned as future testing
4	A personal developer instance can go to sleep after a period of inactivity.	Wake the instance from the ServiceNow developer portal before demonstrating
