

Scalability & Future Plan

Date	29 September 2026
Team ID	SWTID-2026-1410
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders With Flow Designer
Maximum Marks	1 Mark

Scalability & Future Plan:

This document lists the limitations of the current laptop ordering flow and explains how it can be scaled and extended, for example with manager approval, email notifications and a dashboard, along with the planned phases.

Current System Limitations:

S.No	Limitation	Impact	Priority to Address (High / Medium / Low)
1	The flow only creates a catalog task. There is no manager approval, email notification or inventory update.	Requester is not informed of progress; approval is not checked	High
2	The catalog task is closed manually by the Hardware team.	Delivery status depends on a person updating the task	Medium
3	Load with many users and CPU / memory use have not been measured. There is no error handler in the flow.	Behaviour under heavy use and on failures is unknown	Medium

Scalability Plan:

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load	Tested with one user and one order	Test with many simultaneous orders and review Flow Designer execution details in Operations
2	Data Storage	Uses the built-in request, requested item and catalog task tables	Archive old requests as records grow; add reports on the same tables
3	Performance	Task created about 82 seconds after the order in one test	Measure more orders; check flow execution and reduce waiting time
4	Security	Standard ServiceNow login and roles; separate demo user for evaluators	Give each role only the access it needs and add an approval step for orders

Future Roadmap:

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 2	Manager approval step and email notification to the requester	Next iteration	Orders are checked and the requester is kept informed
Phase 3	Error handler in the flow, flow description and comments	After Phase 2	Fewer failed orders and easier maintenance
Phase 4	Asset / inventory update and a dashboard for order status and delivery time	Later	Better tracking of laptops and faster reporting
