

Solution Requirements

Date	29 September 2026
Team ID	SWTID-2026-1410
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders With Flow Designer
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/ Medium/ Low)
1	Authentication	Users log in to the ServiceNow instance with their own credentials before they can open the Service Catalog. The logged-in user is automatically recorded as the requester ("Requested for" / "Opened by").	High
2	Authorization levels	Requester: any user with Service Catalog access can order the Standard Laptop. Hardware group: members receive and work on the catalog task. Administrator: builds and maintains the catalog item and the Flow Designer flow.	High
3	External interfaces	No third-party system or external API is used. Everything runs on the built-in ServiceNow Service Catalog and Flow Designer (Workflow Studio).	Low
4	Transactions processing	Ordering the Standard Laptop creates a Request (REQ) and a Requested Item (RITM). The flow "Standard laptop tasks" is triggered from the Service Catalog and runs the Create Catalog Task action, which creates a catalog task (SCTASK) for the requested item.	High
5	Reporting	The requester sees an Order Status page with the request number after ordering. The request, requested item and catalog task records can be opened and listed in ServiceNow, and the flow run can be checked in Flow Designer.	Medium

S.No	Requirement Category	Requirement Description	Priority (High/ Medium/ Low)
6	Business rules, etc.	The catalog item offers one standard laptop model (Lenovo Carbon x1) with optional software (Adobe Acrobat, Adobe Photoshop) and an additional software requirements field. Every order automatically creates a catalog task described as "Laptop need to Configured", assigned to the Hardware group, with Approval set to Approved.	High
7	Compliance to laws or regulations	Request and user data stay inside the organization's ServiceNow instance and are protected by ServiceNow roles and access controls.	Low
8	Other	The catalog item is linked to the flow through the Process Engine tab, and the flow must be activated for it to run.	High

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	After an order is placed, the flow should create the fulfillment task automatically without any manual step.	Catalog task created within 2 minutes of the order
2	Scalability	Each order runs its own flow instance, so several laptop requests can be placed at the same time without changing the flow.	Multiple requests handled with one task each
3	Security & Data Privacy	Only logged-in users can order, and access to request and task records is controlled by ServiceNow roles.	Login required; role-based access on all records
4	Reliability & Availability	The flow runs on the ServiceNow platform, and its executions can be reviewed in Flow Designer if a run fails.	Every order produces a request, item and task
5	Usability & Accessibility	The order page is a simple form with clear labels, optional software checkboxes and a confirmation message with the request number.	Order placed in a few clicks; confirmation shown
6	Other	Maintainability: the flow is built visually in Flow Designer without custom code, so an administrator can change it easily.	No custom scripting needed for the flow
